Self-balancing scooter (hoverboard)

Risk type

**Burns
Electric shock
Fire
Injuries**

The battery does not have a device that monitors the cells temperature, hence it may overheat during charging, and the hoverboard cover may ignite. The product may cause a fire and the user may suffer burns. Furthermore, the dimensions of the socket outlet and the flat plug and the insulation between the primary and secondary sides of battery charger are not suitable. The user could touch the accessible live parts and receive an electric shock. In addition, the power cords, which are exposed to movement between the two motors, are routed through a steel pipe with burr edges at both ends. During the life of the product, the insulation of the power cords can be damaged by the sharp edges, the battery may short-circuit and explode during use. As a result, the user might lose control and fall off the scooter and suffer injuries.

The product does not comply with the requirements of the Low Voltage Directive and of the relevant European standards EN 60335-1, EN 60335-2 and EN 62133-2.

Risk type **Fire**

The gasket fixings between the exhaust downpipe and the catalytic converter may not have been tightened to the correct torque and could become loose over time. As a result, hot exhaust gases could leak into the engine compartment, increasing the risk of fire.

The product does not comply with the requirements laid down in the Regulation on the approval and market surveillance of motor vehicles and their trailers, and of systems, components and separate technical units intended for such vehicles.
