Product

Children's fancy dress

Risk type

**Strangulation
Suffocation**

The functional non-detachable cords in the neck area can become trapped during various activities of a child, leading to strangulation. In addition, the non-permeable plastic bag of the product is too thin. If a child plays with the bag, the plastic can cover the mouth and nose, causing the child to suffocate.

The product does not comply with the requirements of the Toy Safety Directive and with the relevant European standard EN 71-1.

Product **Passenger car**

Risk type **Injuries**

The belt tensioner arm may have been manufactured with a borderline tolerance, which could cause one side of the V-ribbed belt to rub against the belt tensioner, causing it to fail. As a result, the coolant pump may stop working, causing the engine to overheat, thus compromising the impermeability of the oil sump. Consequently, oil may leak onto the road, posing a risk to the following traffic.

The product does not comply with the requirements laid down in the Regulation on the approval and market surveillance of Motor Vehicles and their trailers, and of systems, components and separate technical units intended for such vehicles.

Product **Lorry**

Risk type **Injuries**

The preload force of the screw connection between the cab stabiliser and the stabiliser bar link is below the minimum threshold. This could cause the cab to move around and, possibly, the screws to break. If the cab were displaced, the steering shaft could conceivably jam, and in a worst case scenario, impair steerability.

Product **Passenger car**

Risk type **Fire**

The corrosion protection on the high voltage battery housing cannot be guaranteed to last for the whole lifetime of the vehicle. After the vehicle has been in use for a longer period of time, the high voltage battery housing could therefore corrode under certain specific environmental conditions. In this case, the sealing effect of the battery housing could then gradually be compromised, allowing moisture to penetrate the battery. This could lead to insulation failure, resulting in it being impossible to restart the vehicle once the engine has been switched off. Furthermore, this could increase the risk of fire.

The product does not comply with the requirements laid down in the Regulation on the approval and market surveillance of motor vehicles and their trailers, and of systems, components and separate technical units intended for such vehicles.

Product

Particle filter mask

Risk type

Health risk / other

The particle/filter retention of the material is insufficient (measured values: as low as 83%). Consequently, the product does not fulfil the health and safety requirements; thus, even if combined with other recommended measures, it may not properly protect. Furthermore, the physical resistance of the filtering material is too high (measured values of exhalation resistance: up to 3,8 mbar). Consequently, it may prevent a sufficient quantity of air to be exhaled, causing difficulties to breathe.

The product does not comply with the Personal Protective Equipment (PPE) Regulation and with the relevant European standard EN 149.

Product **Plastic greenhouse**

Risk type **Environment**

The transparent plastic contains short chain chlorinated paraffins (SCCPs) with measured value up to 0.7% by weight and cadmium with measured value up to 0.03% by weight. SCCPs persist in the environment, are toxic to aquatic organisms at low concentrations and bioaccumulate in wildlife and humans, posing a risk to human health and the environment. Cadmium is very toxic to aquatic life and poses a risk to the environment.

The product doesn't comply with the Regulation on persistent organic pollutants (POP Regulation) and the REACH Regulation.
