Introduction

In accordance with Article 10, paragraph 1 of the Prior Informed Consent (PIC) Regulation (Regulation (EU) No 649/2012), EU exporters and importers must inform their designated national authorities (DNAs) about trade in PIC Annex I chemicals in the preceding year, by 31 March of each year.

In accordance with Article 10, paragraph 3 and Annex III to the PIC Regulation, each EU Member State should then provide ECHA with aggregated information so that ECHA can summarise the data at EU level and make the non-confidential information publicly available.

This report summarises the trade activity in 2022 of chemicals listed in Annex I to the PIC Regulation, based on the data received from the Member States and the United Kingdom regarding trade from and to Northern Ireland (only)¹.

¹ The United Kingdom withdrew from the European Union on the 31 January 2020, and the transition period foreseen under the Withdrawal Agreement ended on 31 December 2020.

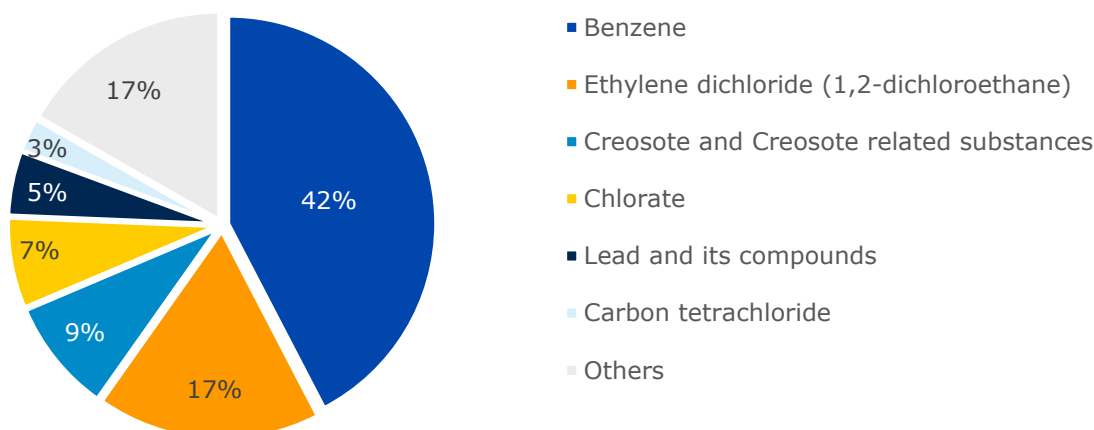

"United Kingdom (Northern Ireland)" is however listed as an *"EU Country"* since, in accordance with the Protocol on Ireland/Northern Ireland, the PIC Regulation continues to apply to that country. *"United Kingdom (Great Britain)"* is listed as a *"Non-EU Country"*.

Export of chemicals

A total of 543 exporting companies from 24 Member States (Austria, Belgium, Bulgaria, Croatia, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, the Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain and Sweden) reported exports of PIC Annex I chemicals in 2022.

3 Member States (Cyprus, Luxembourg and Malta) and the United Kingdom (Northern Ireland) reported that no PIC chemicals were exported in 2022.

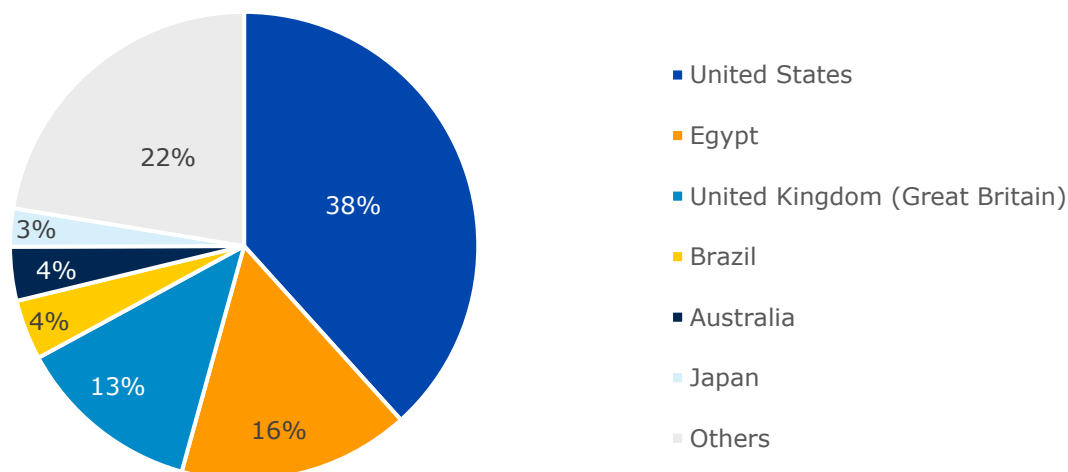

Top 6 exported chemicals and their shares from the 2022 total

According to the quantities reported by industry for PIC Annex I chemicals exported in 2022, there was an increase of 24%, when compared with the total quantities reported in 2021. This is mostly due to exports of benzene which continued the increasing trend from the previous year.

The total quantity of benzene exported represents 42% of the total volume of PIC chemicals exported in 2022.

Importing countries in 2022

In 2022, the United States went in the lead of the importing countries. Based on the reports received from the Member States, benzene seems to be an important share of the total exports

to the United States, while the Netherlands reported the highest volumes of PIC chemicals exported and with benzene as most exported in 2022.

Based on the information received from Member States, ECHA generated the non-confidential summary of data on exports that is available in Tables 1 and 2 of this report.

Table 1 provides a more detailed breakdown of the data, while Table 2 presents an aggregated view by PIC Annex I entry.

Import of chemicals

21 Member States (Austria, Belgium, Croatia, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, the Netherlands, Poland, Portugal, Romania, Slovenia, Spain, Sweden) and the United Kingdom (Northern Ireland) reported imports of PIC Annex I chemicals in 2022.

6 Member States (Bulgaria, Cyprus, Estonia, Luxembourg, Malta and Slovakia) reported that no such chemicals were imported.

191 EU companies reported imports of PIC Annex I chemicals in 2022 to the EU territory.

There was a significant increase in the total amount of PIC chemicals imported in 2022; mainly due to the recent entry, i.e., *benzene as a constituent of other substances in concentrations equal to, or greater than 0,1 % by weight*. This entry was included in the Annex I of PIC Regulation with the Commission delegated Regulation (EU) 2022/643 amending Annexes I and V to the PIC Regulation, published on 20 April 2022, with a starting date of application on 1 July 2022.

Due to the very high volume of imports of *benzene as a constituent of other substances* in 2022, a chemical that was not present in the 2021 reports, a comparison with the previous year is not relevant. Nevertheless, the rest of chemicals in top six imports are similar as in 2021, as can be seen in the graph above, with benzene being the second most imported chemical, mainly from the United Kingdom (Great Britain).

Based on the reports submitted for 2022, the non-confidential summary of the data on imports is available in Table 3 and Table 4.

To be noted that far less data on imports is available compared to exports, since information must be further aggregated to avoid disclosure of confidential information.
